

# ENVIRONMENTAL POLICY AND ENERGY MANAGEMENT

DENSO Czech s.r.o. is a supplier of automotive small motors and systems within the automotive industry. Our target is to produce high quality products complying with high energy efficiency and environmental protection standards. Our company keeps the environmental standards to protect environment for next generations.

- The basic of the environmental care is an implementation of effective management system – i.e. environmental management system and energy management system. DNCZ shall set an environment policy and take actions to achieve the environmental and the energy efficiency goal.
- DNCZ observes legal rules and other environmental and energy management rules. To observe the rules, DNCZ takes active actions and improve processes continuously.
- Continuous improvement of the production processes shall increase the improvement of the environmental profile and energetic efficiency. The newest technological and scientific knowledge, customer requirements and public expectation shall lead to improvement of production processes. DNCZ shall encourage using material which can be recycled or reused.
- Systematic trainings to our employees shall increase the awareness of the responsibilities for environment and energy saving.
- All necessary information shall be provided to employees, public and legal organizations.
- We shall enforce and develop our policy towards our suppliers (material, semi-finished goods, products and services) so that they shall comply with our environmental and energy management criteria.
